This Week in Math:

6th Grade math students continued learning about inequalities. Not only did the students use different phrases and scenarios to write inequalities, but they also learned how to graph them on a number line as well as identify possible solutions. To review for a quiz on inequalities, the students engaged in a whole class review activity of Jeopardy. The students did a great job working in small groups, discussing the content, and most importantly having fun while learning. Great job 6th grade students, keep working hard!

8th Grade Math students continued learning about two-way frequency tables and completed an online activity where they had the opportunity to share their answers interactively with the class. Interestingly enough, the data was based on results from the Titanic. The students used this information to compare information as well as make predictions and conclusions. Great job 8th grade math students, keep up the great work!
