This week in 6th Grade Math:

The students in 6th grade worked collaboratively with partners to review their knowledge of common decimal and

fractions conversions, such as $0.25 = \frac{1}{4}$

and $\frac{1}{3} = 0.33...$. The students also

completed their own number lines with positive and negative numbers, decimals, and fractions to display on the front wall of the classroom. They did a great job working in pairs, and reflected on their collaboration with the use of a rubric and a Google form. Great job 6th grade!

This week in 7th Grade Math:

The students in 7th grade found the percent of the United States of America that Avon-by-the-Sea represents in square miles! They found that the answer was approximately 0.000026%! The students have been so involved in this topic that this problem was initiated by a student! The 7th grade class also found the percent of 7th graders in AES who own a pet. In class, they then discussed how to find the percent of students that do not own a pet. There have been so many great conversations in 7th grade math, and the students have been relating much of it to their personal lives. Keep up the great work 7th grade!
