This week in Algebra 1: This week the Algebra students began their unit on functions. To begin the unit, the students watched a video of a male swinging on a swing. The students watched the video multiple times, and were reminded to pay attention to the height of his waist from the ground over a specific period of time. In addition, the students had a coordinate plane on their desk and were asked to graph the relationship between the two quantities (or variables). Initially, the student's graphs did not represent the scenario, but as they watched the video more and we discussed the situation in more detail, the students were able to use a real world application in the math classroom. Great job Algebra 1, keep up the good work!
