This week in Algebra 1:

The students participated in a Performance Task activity where they worked with a partner to solve a real world application problem using their knowledge of functions, tables, graphs, plotting coordinate points, continuous vs. discrete, and linear vs. non-linear functions. The students have been using their vocabulary on a daily basis, and working very hard to demonstrate their knowledge of the material. Great job Algebra 1!

This week in 7th Grade Math:

The 7th grade class has continued to demonstrate their knowledge of rational vs. irrational numbers as well as identifying if a decimal is terminating or repeating. This week, the 7th grade students were introduced to perfect squares and approximating square roots that are not perfect squares. They did an excellent job in their review and on their quiz today. Keep up the great work 7th grade!
