This Week in Room 202:

6th Grade Math students continued to learn how to solve one-step equations using inverse operations. Last week the students used addition, subtraction, multiplication, and division, whereas this week they had to apply their knowledge of reciprocals. The students had the opportunity to participate in a partner activity of Connect Four where they took turns solving equations to try to win a game of Connect Four. The students ended the week with a guiz to check for understanding, and they all did a great job! I am so proud of your hard work 6th grade, let's continue working this hard next year!

8th Grade Math students continued working on their scatter plots projected and presented them to the class. The students did a good job explaining their work as well as describing what all of the data represented. Their graphs were clear and accurate, and collectively as a class, they did a wonderful job! Great job 8th grade, keep working hard throughout the New Year!
