## This Week in Math:

6<sup>th</sup> Grade Math students learned about unit prices. Using the information, the students were able to compare different rates to determine "the better buy" and participated in an activity with a classmate where they had to determine the better deal given items at two different supermarkets. The students did a great job finding the unit rates, and even realized that they have done this before, but now with a new vocabulary term. Great job 6<sup>th</sup> grade, keep working hard!

8<sup>th</sup> Grade Math students engaged in a gallery walk activity where they worked with a partner to determine the sequence/composition of transformations, including translations, reflections, and rotations, that occurred from a pre-image to a final image. The students did a great job not only identify the transformations, but using the proper notations and vocabulary. Great job 8<sup>th</sup> grade math students, keep up the great work!
