This Week in Math:

Algebra 1 students learned about radicals this week, with a focus on square roots. The students identified perfect squares, and were able to simplify square roots that are not perfect squares. In addition, the students were able to simplify radicals using multiplication and division properties as well as rationalize the denominators (so that the denominator of a fraction does not have a radical), and use Distributive Property to multiply radicals. The students did a good job applying these skills, and will further demonstrate their knowledge when they learn about the relationship between rational exponents and radicals next week. Great job Algebra 1 students keep working hard!
