This week in Algebra: The students in Algebra have been working very hard learning, practicing, and reviewing many components associated with quadratics such as graphing, factoring using multiple methods, critical attributes, etc. The students participated in a stations activity on Friday where they worked in groups to complete different activities all associated with quadratics. After about 20 minutes, the students rotated to another station with a different activity. In addition, one of the stations was a PARCC practice station where the students had the opportunity to review and practice PARCC-like problems. Great job Algebra, keep up the good work!

This week in Geometry: The

Geometry students learned about trigonometric ratios this week and related it to real world applications such as a ladder leaning on a wall and an airplane flying over an ocean. They used these ratios to find missing side lengths as well as missing angles. Great job Geometry students, keep working hard!
