This week in 7th grade math the students learned about populations and samples when conducting a survey. The students learned that there are different types of samples and which samples are most representative in a given scenario. The students also identified different ways to form a sample. In addition, the 7th grade students used different data points to draw inferences, or conclusions. The students used dot plots and box-and-whisker plots to compare data and answer questions based on given models. Great job 7th grade, keep working hard!

This week in 6th grade math the students were introduced to percent's. The students did a great job identifying where they see percent's in the real world, or their everyday lives. Given scenarios, the students were able to write ratios/fractions, convert them to have a denominator of 100 as well as convert them to decimals, and identify the percent based on the values. The 6th grade class will continue to apply percent's this upcoming week. Great job 6th grade, keep up the great work!
