This week in 7th Grade Math:

This week the students in 7th grade math became masters at content of a specific topic. In groups, they used Google slides to create a lesson that they will teach to their classmates in a Jigsaw style method. Using Pearson, the students in 7th grade found examples and key concepts necessary to become experts on their topic. On Monday, the students will teach their classmates in small groups using the presentation that they created!

This week in Geometry:

Geometry is a new subject this year in AES, and the students are off to a great start! This week in Geometry, the students used compasses to complete constructions, such as copying a line segment and copying an angle. They had the opportunity to apply their Algebra skills and came up with a conjecture leading to an "ah-ha" moment by seeing the relationship between copying an infinite amount of line segments to a circle and its infinite amount of radii!
