This week in Geometry the students performed multiple constructions using their compass tool. The students were excited to learn how to copy an angle as well as construct an angle bisector. The students first learned the angle bisector postulate, practiced and applied their algebra skills, and then constructed the bisector. The Geometry students have been working hard and learning an abundance of new vocabulary. Keep up the great work!

This week in 6th grade math the students reviewed their knowledge of operations with decimals. The 6th grade students applied word problems, and practiced annexing zeroes as well as "scooping" their decimal points when necessary. The students worked as a class as well as independently to show off their skills. Great job 6th grade!
