5th: We continued our investigation of physical and chemical changes with some very cool hands on labs! Ask about what happened to the steel nail in vinegar and salt!

6th: We began looking at the specialized cells inside our bodies and connecting their structure with their function. Viewed them under the microscope and are getting excited to learn more about the organization in the body next week!

7th: Summative Properties of Matter/Chemical Reaction Lab this week! Everyone did a great job conducting the experiment like true scientists!

8th: Rounded out our natural selection unit by looking at mutations and if they are responsible for adaptive traits...On to evolution!!
