5th: Chemical reactions assessment “the most fun test I’ve ever taken”! Finished our chemical reactions unit and are moving on to water on the planet.

6th: We looked at respiration and how this process provides oxygen for all the cells in the body. Wrapped it up by making some interesting multisystem models to show how nutrients and oxygen travel to cells all over the body!

7th: Natural to synthetic product continues with our Plastics PSA project – good or bad for humans or the environments? Groups are evaluating graphic data and additional resources to gather evidence to support their claims in a PSA video or newspaper.

8th: We looked at the fossil record for evidence of evolution of living organisms and environmental changes. We rounded out the week with a thrilling documentary on the evolution of the human species!
